

## When do NetSuite Customers need . . . **eBizNET?**

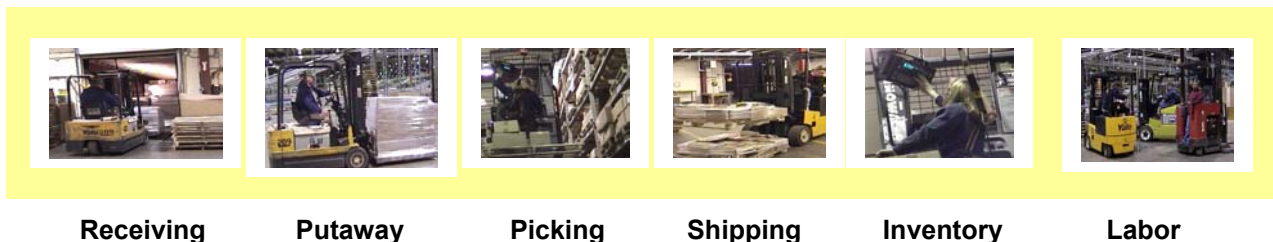

**eBizNET** is designed to manage complex distribution operations, providing better productivity, better inventory management, and performance management tools.

**eBizNET** is an integrated suite of supply chain execution software including warehouse management – designed to manage the wall-to-wall operation of a warehouse, beyond tracking inventory.

**eBizNET** is feature rich, providing NetSuite customers with capabilities traditionally reserved for much larger companies.

Distribution operations can be highly complex environments. Customer and market demands, cost pressures, variability of items, customized services bring complexity to the warehouse. Even smaller operations can no longer afford to use the old manual, paper driven way of doing things. These operations require better tools to manage growing costs and to seek or retain business, in essence, to remain competitive.

***eBizNET fully and seamlessly integrated with NetSuite, is the solution !!***

**eBizNET** complements and expands the capability of the NetSuite platform, bringing the latest in warehousing best practices, efficiencies and technology to the table. NetSuite customers, new or existing, now have at their ready a robust software system that provides:

- Order and Wave Planning
- Pick and Replenishment Sequencing
- Pick Strategies
- RF Technology
- RFID Technology
- Cost Tracking
- Lot/Batch/Serial # Management
- Labor and Workload Management
- SKU Attributes – Color, Size, Style
- PO & ASN Receiving
- Putaway Strategies
- Directed Putaway
- Dock & Yard Management
- Random Zoned Storage
- Transportation Management
- Directed Cycle Counting
- Extensive Bar Code Scanning
- Third Party Services Billing & Costing

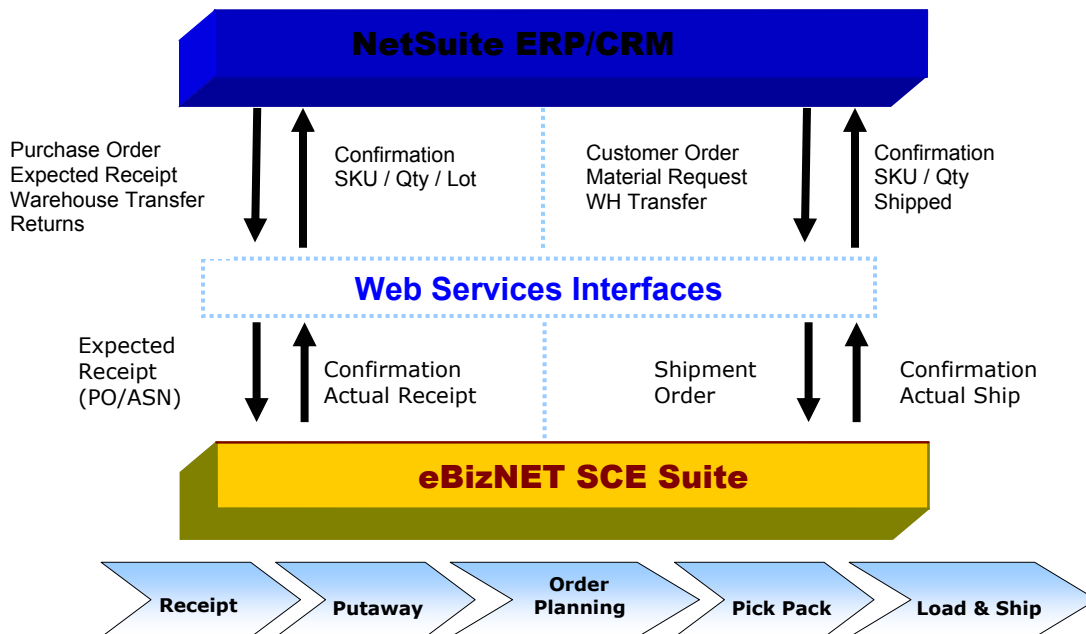

## eBizNET may be the solution for NetSuite customers when any combination of the following characteristics apply . . .

- The size of the operation is over 25,000 Sq Ft
- There are more than 10 people working in the warehouse
- The customer handles expensive items or delicate equipment
- Items require lot and expiration date tracking, including drugs, food and beauty aids
- The order volume of the operation is over 100 orders or 500 lines per day
- The number of SKU's handled in the warehouse exceeds 200 or rapidly changes
- Any third party logistics customer
- Any customer faced with RFID compliancy
- Customers expressing a desire to use RF terminals or bar coding
- Customers who need to ship individual pieces or split case shipments
- Customers with storage constraints
- Any operation that requires more than a single physical inventory to manage accuracy.
- Customers complaining about order cycle times and/or order accuracy
- Where the operation is supported by material handling systems – conveyor systems

(Note that these are broad guidelines, other factors could influence the customer's needs.)

### How does eBizNET integrate with NetSuite?

eBizNET is seamlessly integrated with NetSuite using the Web Services technology. There are 5 touch points between the two systems, namely orders, shipments, purchase orders, receipts, and inventory adjustments. When a customer enters an order in NetSuite, eBizNET will pull the order in and make it visible to the warehouse for fulfillment. Once shipped, eBizNET will update the order status and quantity in NetSuite – for practical purposes, as if the order was fulfilled within NetSuite. The same happens with receipts and inventory adjustments. There are no extra steps required, there is no manual intervention. There is no programming or integration effort involved, it takes just a few minutes to configure eBizNET to exchange data with your NetSuite account.
